COURSEWORK

POST GRADUATE

Object Oriented Programming (OOPs)

Data Structures

Algorithms

SKILLS

Frontend Technologies :

HTML5/CSS3 • Tailwind • JavaScript •
React.js • Redux • Next.js • Material UI •
Chakra UI

Familiar:

Node.js • Express.js

Version Control :

Git

Others :

Linux

EXPERIENCE

BROWSERSTACK | FRONTEND SOFTWARE ENGINEER

June 2023 – Present | Remote, IN

- Developed a real-time dynamic search feature across multiple products. Implemented **debouncing** to prevent unnecessary API calls. This was achieved using **React.js**, **Algolia**, and **vanilla JavaScript** for legacy products, delivered a faster, more efficient search system.
- Developed an intuitive layout for easy navigation and understanding. Reduced the onboarding time for new users by centralizing key information in one place, using: **React.js**.
- Created a robust search interface that allowed users to filter results across multiple resource types. Leveraged **Algolia**'s powerful search engine to ensure lightning-fast content retrieval and relevances. Built using **JavaScript** and **Algolia**.
- Built a simple, intuitive interface for users to submit queries or request help directly from the platform. Integrated support channels, including FAQs, live chat, and contact options, all within a single, easily accessible location. This feature was built using **React.js** to enhance user support accessibility.

RADIANSYS INC | SOFTWARE ENGINEER

April 2022 – June 2023 | Gurgaon, IN

- Built a software product front-end which analyzes how better the users use the features (AI scores and preference scores based on some job's/user's criteria) provided to them, using **React.js**, **Typescript**, **Chakra UI**.
- Built a Product Review system with images and the user profile management (activation, deletion, and updation) UI and functionality for an E-commerce software using **Next.js**, **React.js**, **Typescript**.
- Built functionality for creating appointments and added Jitsi video conferencing using **Next.js**, **React.js**.
- Built UI components from scratch, which reduced 25% of development tasks using **Next.js**, **React.js**, **Material UI**.
